Method ①

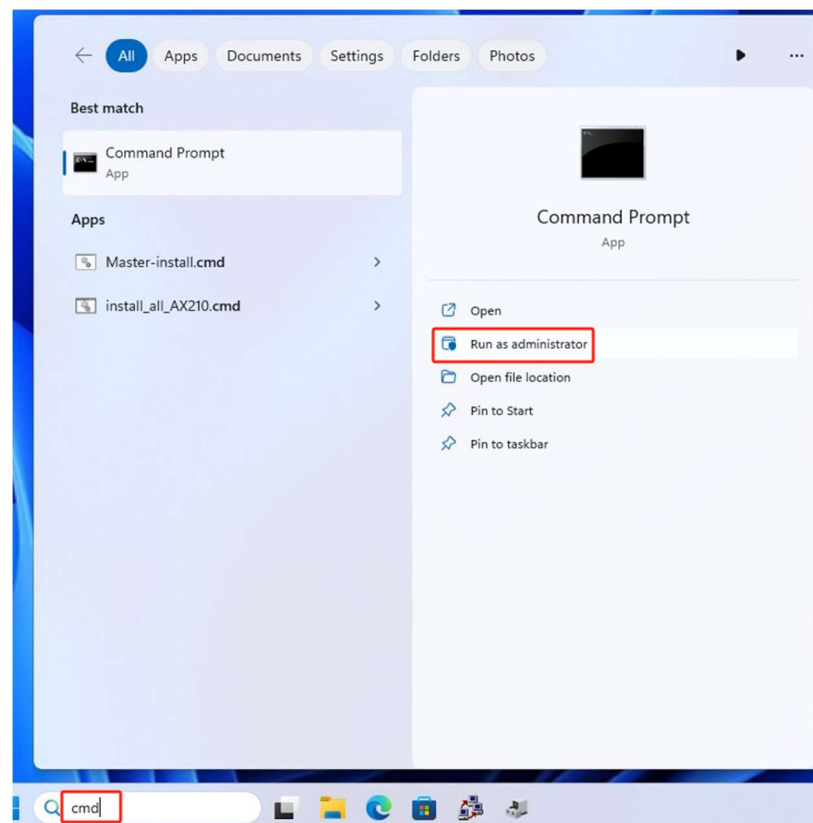

For example: install.bat ,

Use the right mouse button and click Run as administrator.

Method ②

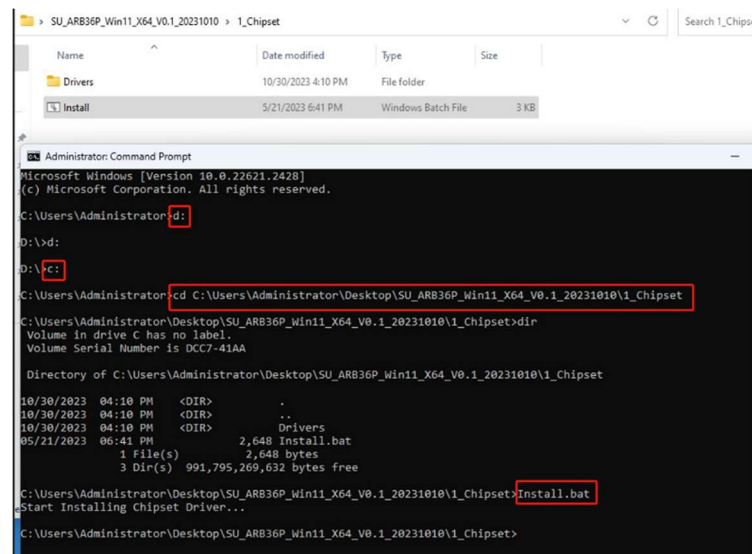

Type "cmd" in the window search bar, find "Command Prompt" and click "Run as administrator".

In the pop-up window, enter the corresponding file directory.

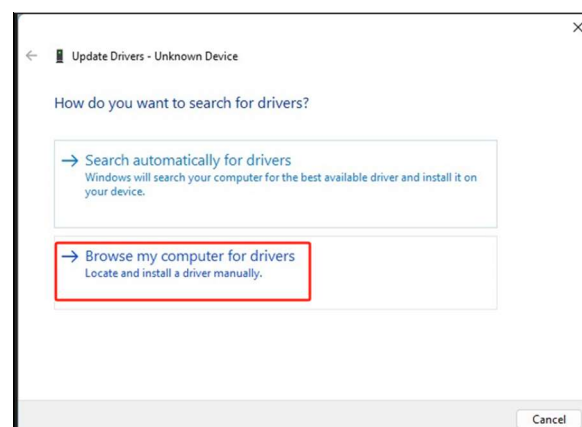

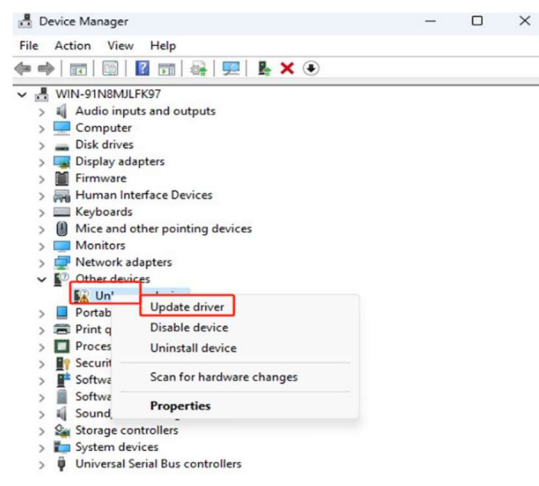

For example: the driver file is in C disk, or D disk, please input C: or D: Enter.

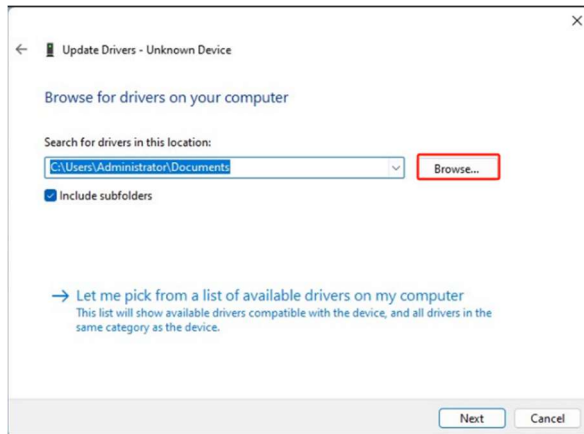

Then use the command "cd" to enter the driver directory, type "install.bat" to finish the driver installation.

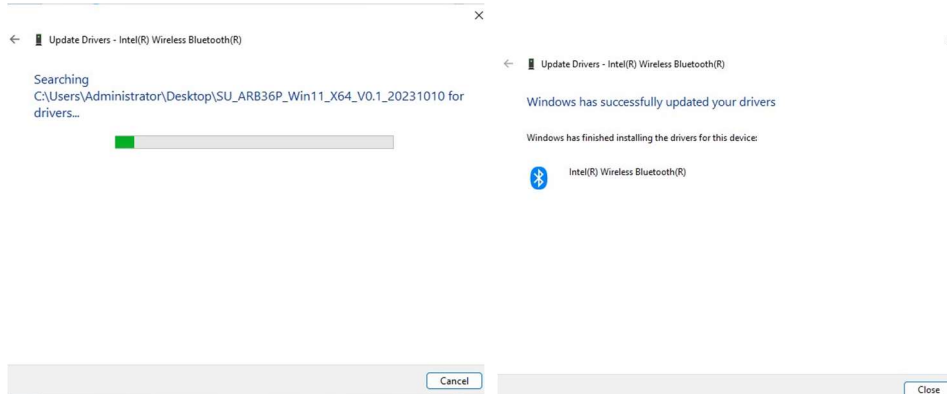

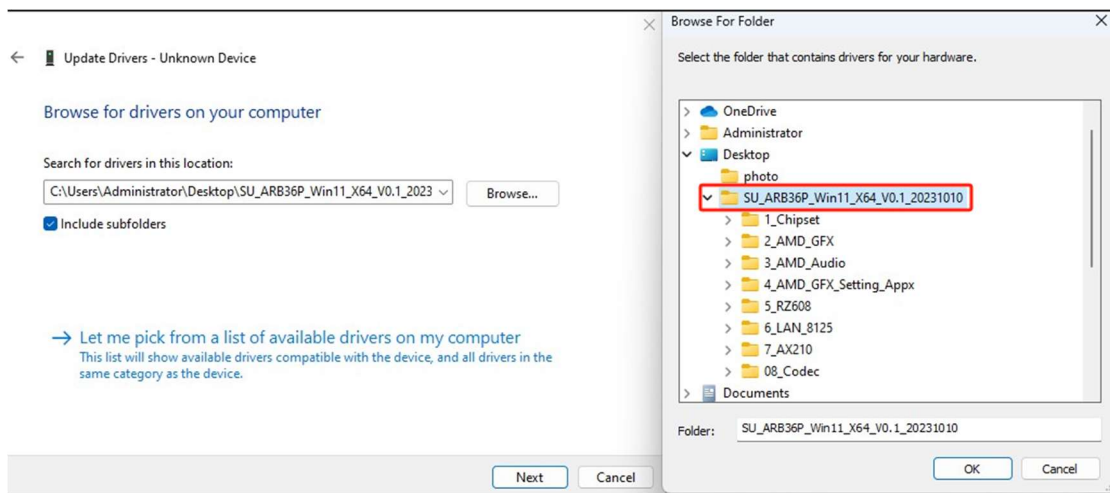

Method ③

In the device manager, find the uninstalled driver and right-click on it to "Update driver".

Select the directory where the driver is stored, and the system will automatically match the driver for that computer.

Method ④

Inf file installation, in the driver folder, find the file extension .inf file, file type "Setup Information" right mouse button pop-up "install" can be installed directly.
